Project Document Manager - PDM 3.0

Create, Publish, Manage, and Distribute Project Information More Effectively

PDM 3.0 Configuration Guide

PDM 3.0 can be configured in many ways. The base system starts out as a PDM Planroom 3.0 and can be upgraded at any time to PDM Pro 3.0. PDM Planroom users can add PDM Pro 3.0 functionality easily without impacting their already established information.

PDM 3.0 licenses can be combined in countless configurations to meet the needs of each project and user. A single PDM Pro 3.0 system can consist of any combination of the three PDM 3.0 user levels - Planroom, Pro, or Collaboration. This assures that each project participant has the functionality they need to be successful.

Both PDM Pro and Collaboration 3.0 are available on per seat subscriptions. This makes it flexible to be used on a project or for an entire organization.

Here are some examples of how PDM 3.0 components can be deployed:

PDM Planroom 3.0

Subcontractors, owners - Users that need to capture, organize, view, and print project information need PDM Planroom. Planroom licenses are unlimited for each system allowing all project participants access to projects in the PDM system.

PDM Pro 3.0

Owners, General Contractors, Construction Management, Subcontractors - Users that need the full functionality of PDM 3.0 will need Pro licenses. Each Pro user will be able to review prequalification information, perform invitation to bid, manage bids, evaluate subcontractors, manage the electronic submittal process including the documents, and other important tasks all from a single dashboard.

PDM Collaboration 3.0

Architects, Consultants, Engineers - Users that need to publish content to a project that do not need all the functionality of PDM Pro can be setup with a PDM Collaboration 3.0 license. PDM Collaboration 3.0 users will be able to publish project information directly to the PDM Pro 3.0 system. Collaboration licenses can be added to any PDM Pro 3.0 system.

This illustrates the PDM 3.0 suite and how it can be configured in countless ways to meet the needs of every project. Components can be mixed and matched to provide each project participant with the tools they need to deliver a successful project.
